Are you seeking monitoring, access and alarms on your grain or feed system? Looking to add sequencing to improve operator ease, avoid product mixing, and implement reliable fail-safe mechanisms?

The **AgriPanel** is designed to bring reliable automation to systems of all sizes in a customized, competitive format. We believe this technology is no longer just for big-time operators, but for anyone with machines to control or goals of expansion in the future. AgriPanel offers:

- **Reduced downtime, stress, and mishaps**
- **Increased safety, visibility, access, and efficiency**
- **Greater flexibility to expand, change, and integrate systems**

AgriPanel can incorporate your various control needs into one system, including;

- **Variable frequency drives, soft starters**
- **Motor supply**
- **Sensors, meters, alarms**
- **Dryer tie-in**
- **Buttons, switches, outdoor panels**
- **Data management**
- **HMI's, remote access, large status displays**
- **Phase conversion, power factor correction**

With the Web-Based User Interface:

- **Know your operations control status**
- **Adjust speeds of your motors**
- **Remotely turn equipment on and off (manual mode)**
- **Create your own automation sequences and schedules, e.g.:**
 - ◇ *Sequence motors of pit drag, elevator and horizontal conveyors based on bin selection and diverter positioning*
 - ◇ *Schedule fans to run automatically in a way that optimizes peak demands, time of day, and weather conditions*

The web-based interface also allows IDS to provide quick remote support for issues you may be experiencing.

Leg Control

Diverter/Turnhead Control & Sensing

Grain Type & Fill Control

Dryer Tie-in

Remote Access

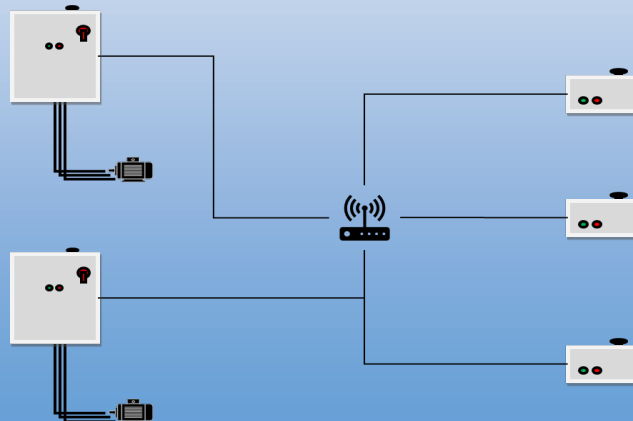

With **every** AgriPanel, you get the following benefits:

- The AgriPanel web interface, accessible from mobile devices, PCs, or mounted HMIs
- Pre-programmed sequences to suit your operation, with the ability to easily add more
- CSA certified panels built by a reputable controls and automation company
- The insurance of diligent drawings and record-keeping from an ISO 9001:2015 Registered Company
- Access to 24/7 support from trained IDS technicians, including remote monitoring and troubleshooting

Need more? IDS can help with your unique application by including:

- Outdoor Installation – IDS can utilize enclosures that allow for temperature variations, rain, dust, etc.
- HMI Touchscreens mounted to panel, unique displays configured for larger monitoring/status screens
- Physical buttons, lights and dials as required
- Custom-built, single-phase service to three-phase voltage conversions

“Growing is your goal. Choose a system designed to grow with you.”

Link multiple AgriPanel products together to expand your system quickly, and without interruption of your already placed system.

Industrial Drive Service (IDS) Inc. is an advanced, custom design systems house established in 1988. We design, assemble/manufacture, program and install DC and AC variable speed drive-motor control systems, including PLCs and HMIs. Our systems are integrated into a wide variety of industrial applications, including metal processing lines, materials handling equipment, automation applications, process control, and agriculture.
